
Oil & Gas: Overview

Rolta's deep industry experience and breadth of technology capabilities can deliver solutions that make a lasting impact.

Both upstream and downstream companies are pushed to be efficient and productive in ever-changing political, technological, geographic and economic environments. Global demand for oil and gas continue to increase putting an added emphasis on efficient upstream operations. Exploration and production companies must leverage all the information available to deliver product from the well head to the refinery. Business operations from refining through delivering energy to the final user are complex and cut across a wide range of business systems and organizations. These systems, often on different platforms and geographically diverse, all provide key information.

To be successful in today's dynamic business environment, business data must be synthesized into real time actionable information. For both upstream and downstream operations, this actionable information provides the insights needed maximize performance and revenue. Rolta's deep industry experience and breadth of technology capabilities can deliver solutions that make a lasting impact.
